

ABSTRACT

The present invention, data filtering for adapting data delivery to diverse client devices, comprises a data transforming process and a data filtering process. The data transforming process transforms the original content data into multiple versions of content data and stores into the content cache for the diverse client devices, by using the device character of the all client devices. On the other hand, the data filtering process, on requesting of a certain client device, first finds out a best version of content data from the content cache, and then transmits it to the requesting client device.
